**"From Scope Document to Boardroom-Ready Proposal — in Under 90 Seconds"**

No more days of manual writing. No more inconsistent estimates. One button. Complete package.

## WHAT'S INSIDE THIS DECK

- The Problem We Solve
- Key Features
- ROI Proof & Comparison
- How BELAL Works
- Pricing Packages
- How to Get Started

# Why Presales Teams Are Struggling

Manual proposal writing is costing your business more than you think

# £3,000

average senior consultant cost per manually written proposal

That's before accounting for delays, rework, and deals lost to faster competitors.

## ■ 15–40 Hours Per Proposal

Your best consultants spend entire working weeks formatting spreadsheets instead of winning deals. A single enterprise proposal consumes 3–5 days of senior time — every single time.

## ■ Inconsistent Estimates

Two consultants, same project — 30% different estimates. Clients notice. Inconsistency destroys credibility and makes negotiation unpredictable.

## ■ Generic Templates Clients See Through

Clients receive proposals that feel copy-pasted. No specificity, no insight. They can tell you didn't read their document carefully — because you couldn't.

## ■ Slow Turnaround Loses Deals

Your competitor submits in 24 hours. You take 5 days. In presales, speed signals capability. Slow proposals lose deals before the meeting even happens.

## ■ Tribal Knowledge Is Never Captured

Your most experienced consultant retires and takes all institutional estimation knowledge with them. Every new hire starts from zero. The same mistakes get repeated.

# Introducing BELAL

One platform. Eleven AI specialists. Complete proposal in 90 seconds.

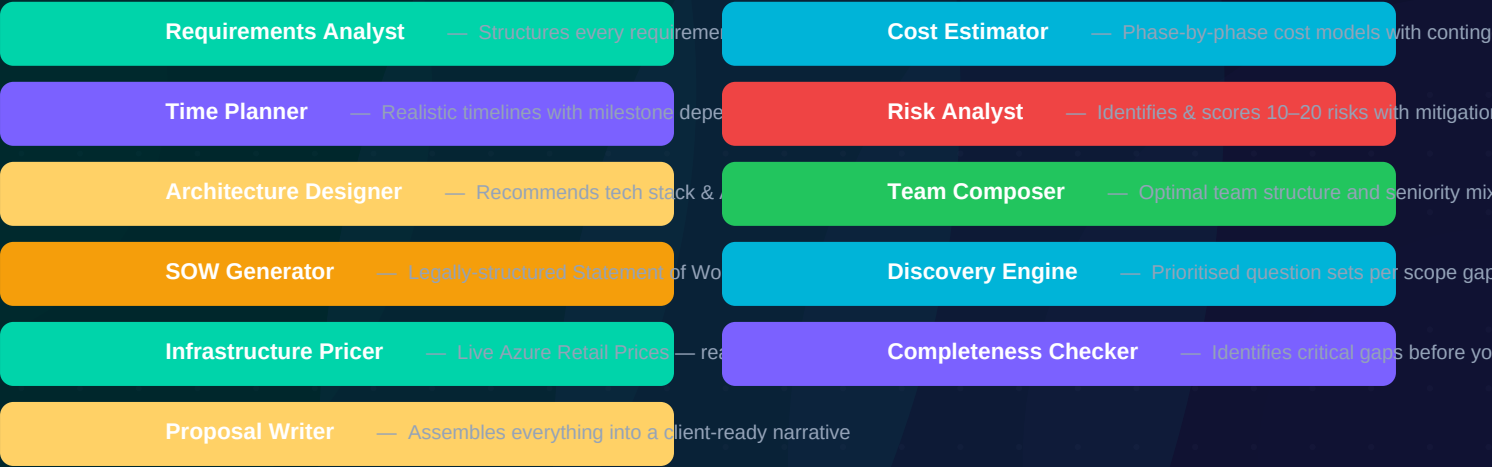

90 Seconds.

That's all it takes to go from blank scope to boardroom-ready package.

Compare that to 15–40 hours of manual writing. BELAL pays for itself on the very first proposal.

## 11 Specialised AI Agents

Not one general AI — eleven purpose-built specialists working simultaneously

# Everything Your Presales Team Needs

Every feature built for one purpose — winning more deals, faster

■ Real-Time Scenario Modelling

Client asks 'what if we cut scope by 25%?' Answer it in the room, in real-time. Drag sliders to adjust scope complexity (0.5×–2.5×), team size, pricing model. Up to 3 scenarios simultaneously. Export comparison Excel to hand to the client. Brooks' Law applied automatically — no naive headcount math.

■ Live Azure Infrastructure Pricing

Fetches real prices from the Azure Retail Prices API every time you run. Architecture recommendations automatically feed the pricing engine. Actual 2025 list prices for every recommended service. Static fallback catalog if API temporarily unavailable. CFO-defensible numbers.

■ 3D Architecture Viewer

Technical diagrams in Word documents are forgettable. A 3D fly-through is not. Your Azure architecture renders as an interactive 3D graph — rotate, zoom, pan. Click any service node to see its purpose, SKU, and monthly cost. Built on Three.js — runs in any browser, no plugins required.

■ AI Video Narrator

Your proposal now comes with its own presenter. Integrate with HeyGen, D-ID, or ElevenLabs to generate an AI avatar that narrates the executive summary. Send the video before meetings — clients understand the proposal before you even connect. Download as MP4 to attach to emails or embed in SharePoint.

■ AI Chat — Your Proposal Knows Itself

After generating, ask anything: 'Why is the risk score High?' 'Explain the architecture to a non-technical client.' 'Draft our follow-up email.' Full context of your specific proposal — not generic answers. Rooted in your actual scope, team, costs, risks, and requirements.

■ Scope Completeness Checker

Before you see results, the Completeness Checker reviews your scope document and flags: requirements clearly defined, partially covered, or critically missing. Prevents the most common proposal failure: submitting a detailed proposal that misunderstands what the client actually wants.

# More Features That Set BELAL Apart

Built for teams that demand efficiency, accuracy, and speed

■ Continuous Learning Engine

Records actual hours/costs after delivery. Calculates variance per technology. Derives correction factors automatically. Future estimates improve with every project. The accuracy improvement is measurable, visible in Admin Dashboard — not a marketing claim.

■■ Run Library — Never Lose an Estimate

Every run auto-saved to persistent database. Full searchable history. Architect review gate — mark proposals approved before sending. Compare any two runs side-by-side. Outcome tracking for Won/Lost/Delivered.

■ SharePoint & Email Integration

Publish proposals directly to SharePoint. Email outputs to clients in one click. Integrates with your existing Microsoft 365 environment via Azure AD app registration. No copy-paste, no attachment management. Seamless enterprise workflow.

■ Multi-Model AI — No Vendor Lock-In

Works with Azure OpenAI (GPT-4o), Claude (Opus/Sonnet/Haiku), Google Gemini, Qwen (DashScope + Foundry), and Vertex AI. Switch with one click. Use your existing Azure agreement. Your fine-tuned custom model? It works here too.

■■ Command Palette (Ctrl+K)

Press Ctrl+K and type what you want. Navigate, download, test connections, clear chat — all without touching the mouse. Built for power users who live in the tool daily. Every common action is one keystroke away.

■ Smart Notification System

In-app notification bell keeps teams aligned. 'Run #47 saved', 'Reviewed by Prabhakar', 'Export ready', 'Pipeline complete' — know what's happening without pinging colleagues. Designed for multi-user team environments.

# 9 Professional Formats. One Click.

Every run delivers a complete package — ready to share, present, and sign

■ Excel Workbook

5-tab workbook: Cost Breakdown, Timeline, Risk Register, Infrastructure Costs, Summary Dashboard

■ Branded PDF Proposal

Cover page + all sections in ECI formatting. Client-ready on delivery.

■ PowerPoint Deck

Presentation-ready slides. Drop straight into your client meeting.

■ Statement of Work

.docx format. Milestone payments, acceptance criteria, legally structured.

■ Discovery Prep Deck

Prioritised question sets per scope gap. Never go into a discovery call unprepared.

■ Scenario Comparison

What-if analysis side-by-side in Excel. Hand to the client in the negotiation room.

■ JSON Export

API-ready structured data. Feed into your CRM, BI tool, or custom application.

■ ZIP Bundle

Everything in one archive. One download, send to anyone.

■ Video Narration

AI avatar narrates your executive summary. MP4 download. Send before the meeting.

■ All 9 formats generated automatically in a single pipeline run. No additional steps required.  
Run time: typically under 90 seconds on GPT-4o or Claude Sonnet with standard document complexity.

■ **AI API Cost Note:** Each estimation run costs approximately £0.10–£0.50 in AI API fees (GPT-4o / Claude Sonnet). For teams with existing Azure Compare to: senior consultant time for manual proposal = £800–£3,000. External proposal tools = £200–£500/user/month. BELAL API cost = under £1 per proposal

ROI on day one  
vs manual writing

# Who Benefits From BELAL

Purpose-built for every role in the presales and delivery cycle

## ■ Presales Consultants

Stop spending evenings writing proposals. Upload at 5pm Friday. Complete reviewed package ready for Monday — before you close your laptop.

## ■ Presales Managers

Every consultant produces the same calibre as your best performer. Architect gate ensures quality. Review pipeline streamlined end-to-end.

## ■ ■ Solution Architects

3D architecture viewer and live Azure pricing make recommendations tangible. Clients understand and trust the numbers — no more hand-waving on costs.

## ■ Commercial Directors

Scenario modelling means 3 options ready before every negotiation. 'What if' questions become your advantage, not your vulnerability.

## ■ Sales Leaders

Collective delivery knowledge captured and applied to every new estimate. Accuracy improves over time. Win rates improve with it.

## ■ Enterprise IT Teams

Deploy on-premises or Azure Container Apps. SSO via Microsoft AD. Data stays in your network. Compliant with enterprise security requirements.

# What Our Users Say

“We used to spend two days per proposal. Now the first draft is done before the coffee is cold. Scenario modelling alone transformed how we handle commercial negotiations.”  
— Presales Director, Global Systems Integrator

“The 3D architecture viewer in client meetings is a genuine showstopper. First time I've seen a CFO lean forward during a technical section.”  
— Solution Architect, Enterprise Technology Practice

“The completeness checker caught three critical gaps in a scope we would have priced at a loss. That feature paid for itself in the first week.”  
— Senior Presales Consultant, Digital Transformation Practice

# What's Coming Next

We ship continuously — your platform gets more powerful every quarter

Q2 2026 — Shipping Now

Editable proposal sections (WYSIWYG in-app)

Interactive ROI calculator (client-facing)

Full Word (.docx) proposal export

Proposal public sharing link

Q3 2026 — Next Quarter

Client portal (read-only, branded)

CRM integration (Salesforce / HubSpot)

Real-time multi-user collaboration

Role-based access control (4 roles)

Q4 2026 — Later This Year

REST API layer (FastAPI) for custom integrations

Microsoft Teams bot integration

Mobile-responsive interface

Advanced analytics dashboard

# Enterprise Security & Compliance

Built with enterprise security requirements from day one

■ API Keys in Session Memory Only

Credentials never persisted to disk in plaintext. Compatible with Azure Key Vault injection.

■ Authentication Gate

Admin password or Microsoft SSO (Azure AD). Role-based access in Professional/Enterprise tiers.

■ Data Stays In Your Network

Run data in local SQLite or Azure SQL. No telemetry. No usage data to third parties.

■ Audit & Governance Ready

Full run history. Architect review gate. Outcome tracking. Compliant with enterprise audit requirements.
