

AI-POWERED PRESALES INTELLIGENCE PLATFORM

From Scope to Boardroom-Ready Proposal in Under 90 Seconds.

11 specialist AI agents · 9 professional deliverables · 5 AI providers
One upload. One click. Every document your client expects.

THE PIPELINE · EVERY RUN · FULLY AUTOMATED

ECI Business Estimation Tool · Internal Product · 2026

Transforming presales — one proposal at a time

THE PRESALES PROBLEM

Your Best Engineers Spend 40 Hours Per Proposal.

And the result is still inconsistent, rushed, and not reusable.

40+ Hours

Each proposal takes 1–5 days of senior engineer time.

No Reuse

Every estimate starts from scratch. Past project data sits in emails.

Inconsistency

Two consultants produce wildly different estimates for the same scope.

Missed Scope

Critical assumptions and risks buried in emails, found too late.

£3,000/Proposal

Fully-loaded cost per manual proposal. 10×/month = £360K/year.

Lost Deals

Competitor submits in 2 hours. You take 2 days. Client moved on.

ECI Estimation Tool solves every one of these — simultaneously.

Same scope document. Under 90 seconds. All 9 deliverables. Every time.

THE SOLUTION

One Button. Every Deliverable. Instantly.

Upload any scope document → click Analyse → 11 AI agents run in parallel
producing a complete commercial package in under 90 seconds.

 Excel Estimate Multi-tab workbook with time, cost, risks, team, scenarios.	 PDF Proposal Executive-quality 20+ page PDF with ECI branding.	 PowerPoint Premium indigo 20-slide deck. Dark enterprise design.
 SOW Document Full Statement of Work with deliverables & acceptance criteria.	 Scenario Report 3-scenario Excel: conservative, realistic, aggressive.	 Discovery Q&A Clarification questions for pre-sales workshops.
 3D Architecture Interactive Three.js diagram viewable in-browser.	 AI Video MP4 narrator video via HeyGen or ElevenLabs TTS.	 ZIP Bundle All formats in one download. Ready for the client email.

11 Specialist Agents. Purpose-Built. Always Parallel.

Each agent is an expert in its domain. They run simultaneously and cross-validate each other's outputs.

0

Completeness Checker

PRE-FLIGHT

Audits scope gaps before the pipeline starts.
Generates pre-qualification questions.

1

Requirements Analyst

ANALYSIS

Extracts functional + non-functional requirements.
Tags complexity, ambiguity and risk flags.

2

Cost Estimator

FINANCIALS

Calculates delivery costs per role & phase.
Applies contract type, seniority, and region premiums.

3

Time Planner

SCHEDULE

Builds phased timeline with buffer zones.
Applies Brooks' Law and capacity constraints.

4

Risk Analyst

RISK

Identifies, scores and mitigates 10–20 risks.
RAG status, probability × impact matrix.

5

Architecture Designer

TECHNICAL

Proposes solution architecture with components,
data flows, security, and scalability patterns.

6

Team Composer

RESOURCING

Defines optimal team structure and roles.
Balances seniority mix and utilisation.

7

SOW Generator

LEGAL

Writes complete Statement of Work.
Deliverables, acceptance criteria, exclusions.

8

Discovery Engine

DISCOVERY

Generates intelligent clarification Q&A.
Structured for client workshops.

9

Azure Pricer

CLOUD

Queries Azure Retail Prices API live.
Maps architecture to real infra costs.

10

Proposal Writer

NARRATIVE

Synthesises all outputs into executive narrative.
Full proposal document — human-quality prose.

RESULTS DASHBOARD

15 Intelligence Panels. Every Answer. Instantly.

Results are organised into 15 tabs — no raw JSON, no prompts — clean, decision-ready intelligence.

1  Overview Executive summary with project name, client, type, key metrics.	2  Cost Estimate Fully itemised cost breakdown by role, phase and contract type.	3  Time Estimate Phase-by-phase timeline with milestones, buffers and total duration.
4  Risk Register 10–20 scored risks, RAG status, mitigations and ownership.	5  Architecture Solution components, data flows, security and scalability design.	6  Team Plan Roles, headcount, utilisation and optimal seniority mix.
7  Scope of Work In-scope items, exclusions, assumptions and prerequisites.	8  Scenarios 3 commercial scenarios with side-by-side cost and time comparison.	9  Discovery Q&A Structured pre-sales questions for client workshops.
10  Azure Pricing Live Azure cost map: per service, monthly and annual run costs.	11  AI Architecture AI-generated cinematic diagram with Three.js 3D viewer.	12  Proposal Text Full executive proposal narrative ready to send.
13  Presentation 20-slide premium PPTX viewer with inline download.	14  Video Narration AI presenter video via HeyGen or ElevenLabs. MP4 output.	15  AI Chat Proposal-aware chat assistant. Answers rooted in your specific data.

STANDOUT CAPABILITIES

Features Your Competitors Simply Don't Have

 3D Architecture Viewer Interactive Three.js fly-through of your proposed scope. Rotate, zoom, click nodes. Impress clients in the room. Export as PNG. Auto-generated from architecture document.	 AI Video Narration Generates a full presenter video via HeyGen, D-ID. Your proposal presents itself before the meeting starts. Voice, avatar, slides — MP4 downloadable in one click.	 Continuous Learning Engine Records actual vs estimated hours. Derives correction factors per technology category. Each proposal makes the next one more accurate. Institutional memory that compounds over time.
 Live Scenario Modelling 3 simultaneous what-if scenarios with Brooks' Law, Seniority factors, contract type premiums, scope variations. Answer any commercial question in the room — in real time.	 Real-Time Azure Pricing Queries the Azure Retail Prices API in real time. Every infrastructure estimate backed by actual 2026 pricing. Monthly and annual breakdown per service type.	 Proposal-Aware AI Chat Chat assistant loaded with your specific proposal context. Not generic — every answer is grounded in your actual scope, costs, risks, and architecture. Like having a domain expert on call.
 Persistent Run Library All estimations saved to local SQLite with full history. Client name auto-extracted. Architect review gate. Your estimation library grows every day.	 Command Palette Press Ctrl+K. Navigate tabs, trigger downloads, toggle settings. All keyboard-driven. Built for consultants who run on muscle memory. Zero mouse required for power operations.	 Scope Completeness Checker Agent 0 audits your scope document before the pipeline fires. Detects missing NFRs, ambiguous language, and open assumptions. Generates a gap checklist to resolve before client submission.

Team Throughput

2 → 20 proposals/week

100%

Brand Consistency

Every consultant, every time

Capability	Manual	Generic AI	■ ECI Estimate
Time to first proposal	8–40 hours	2–4 hours	< 90 seconds
Cost per proposal	£800–£3,000	£200+/month	Under £1
Infrastructure pricing	Manual lookup	None	Azure Retail API
Risk register	Ad hoc notes	Basic list	Scored RAG matrix
Scenario modelling	Hours rework	None	3 scenarios live
Learns from actuals	Tribal knowledge	None	Auto-corrected
3D architecture view	Hire designer	None	Three.js viewer
AI video narration	Hire presenter	None	HeyGen / D-ID
Multi-model support	N/A	Single vendor	5 AI providers
SOW document	Template + manual	Basic	Full legal SOW
Consistency across team	Variable	Prompt-dependent	Structured pipeline

"ROI is not a projection. It is arithmetically certain."

At 10 proposals/month you recover the platform cost in the first week.

USE CASES & INTEGRATIONS

Works Everywhere Your Team Works.

PRIMARY USE CASES

Enterprise Pre-Sales

Respond to RFPs and Invitations to Tender in hours, not days. Win rate improves when proposals are faster, more complete and visually superior.

Client Discovery Workshops

Run the Discovery Q&A output as your workshop agenda. Every question is grounded in the actual scope documents. Structure conversations that convert.

Architecture Reviews

Architect-gate every proposal with the run history. Review, annotate, approve or reject before client send. Senior oversight without senior bottleneck.

Commercial Negotiations

Pull up the 3-scenario comparison live in the meeting. Show exactly what changes if timeline shrinks or team size grows. Commercial clarity wins trust.

Graduate Onboarding

Junior consultants immediately produce senior-quality estimates. No tribal knowledge required. Ramp time drops from months to days.

Continuous Improvement

Feed in actuals at project close. The learning engine recalibrates estimates automatically. Each generation of estimates is more accurate than the last.

INTEGRATIONS & EXPORT TARGETS

Email / SMTP

Deliver proposals directly to client inbox

SharePoint

Auto-publish to SharePoint document libraries

Azure Blob

Persist all runs to Azure Blob Storage

HeyGen / D-ID

AI video generation for MP4 narration

ElevenLabs TTS

Voice synthesis for audio narration

Milvus Vector DB

Semantic search across past proposals

Your Next Proposal Writes Itself.

Upload a scope document. Hit Analyse. Walk into the meeting with a 20-slide deck, a 3D architecture, an Excel model, and an AI presenter video.
